HANDS-ON PRACTICE PROJECT

META ADS

Lead Generation & Tracking Setup

A practical campaign build for ReelForge AI, covering campaign structure, creative development, website tracking and measurement planning.

BUSINESS

ReelForge AI

Website

reel-forge-ai-psi.vercel.app

DRAFT / UNPUBLISHED

Evidence captured in October 2026

No live campaign results claimed

From ad concept to measurable funnel

A genuine practice build: campaign draft, original creative concepts and website event investigation. No paid delivery was launched.

PROJECT OBJECTIVE

Generate website registrations

Design a Meta lead-generation workflow that attracts relevant marketing professionals, encourages account registration and measures progression toward free-trial activation and paid subscription.

PLATFORM & TOOLS

Meta Ads Manager | Events Manager | Meta Pixel | ChatGPT + Pomelli

Campaign objective

Leads

Configured in draft

Creative directions

02

Static + motion graphic

Tracking proof

PageView

Browser request observed

PLANNED CUSTOMER JOURNEY

01 Ad exposure	→ 02 Website visit	→ 03 Registration	→ 04 Free trial	→ 05 Paid user
Creative + hook	PageView	CompleteRegistration	Start trial	Purchase

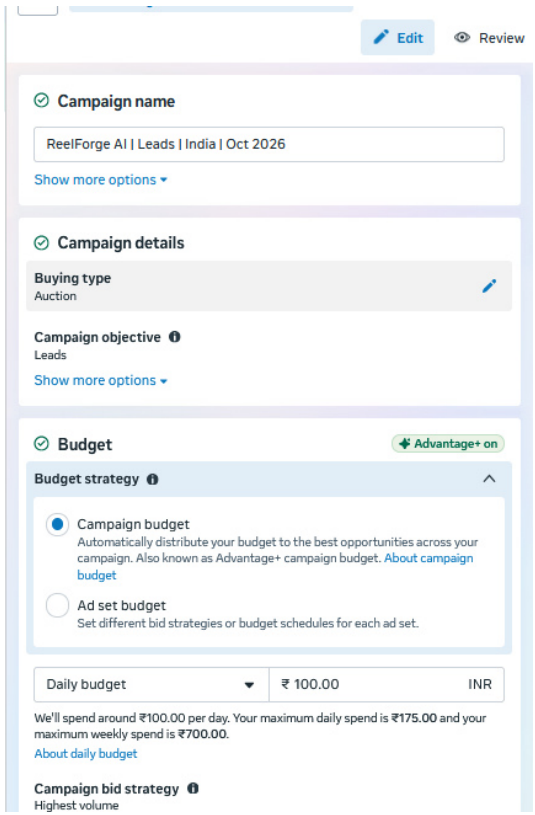

DRAFT ONLY

Current limit: the ad set has Website selected, but the Conversion event dropdown is still unselected in the latest screenshot. Account-registration event mapping needs verification before launch.

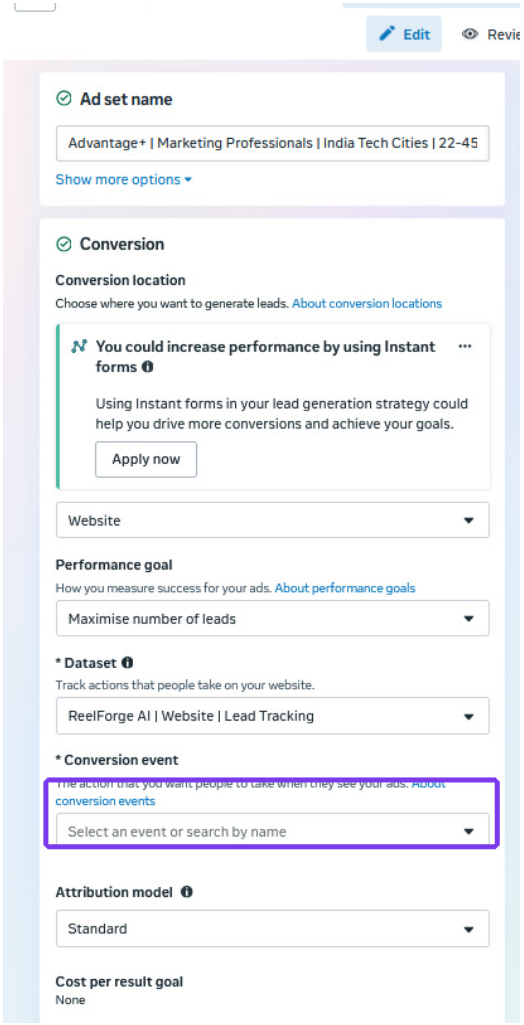

A clear structure from campaign to ad

Consistent naming makes the account easier to operate, review and report on.

CAMPAIGN LEVEL

AD SET LEVEL

NAMING CONVENTION

Campaign = brand + objective + market + period

ReelForge AI | Leads | India | Oct 2026

Ad Set = approach + audience + location + age

Advantage+ | Marketing Professionals
| India Tech Cities | 22-45

Ad = format + hook + CTA + version

Video | Stop Guessing | Sign Up | V1

CONFIGURATION OBSERVED

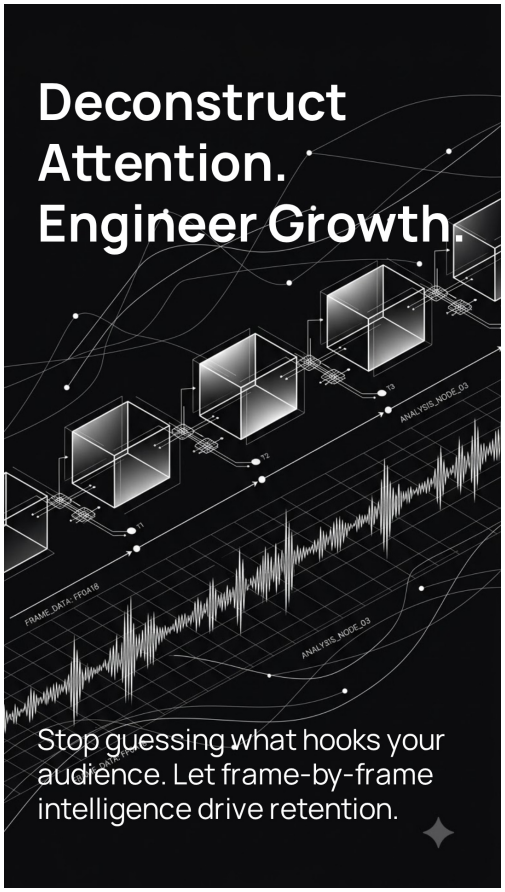

Campaign objective	**Leads**
Budget strategy	**Campaign budget**
Conversion location	**Website**
Performance goal	**Maximise number of leads**
Conversion event	**Not selected in screenshot**

Two creative directions, one product position

Created with ChatGPT-assisted prompting and Pomelli. Original artwork is embedded from the supplied 1080 x 1920 assets.

CREATIVE A / PROBLEM-LED

CREATIVE B / BRAND POSITIONING

SELECTED AD CONCEPT

“Stop Guessing What to Post.”

The problem-led hook makes the audience pain explicit. The supporting message links competitor analysis to a more informed content strategy.

PRIMARY TEXT

Still guessing what content to post? ReelForge AI analyzes competitors and high-performing social content to uncover what makes content work - so you can build a smarter content strategy instead of guessing.

HEADLINE

Stop Guessing What to Post

DESCRIPTION

Discover your brand’s Content DNA.

CTA

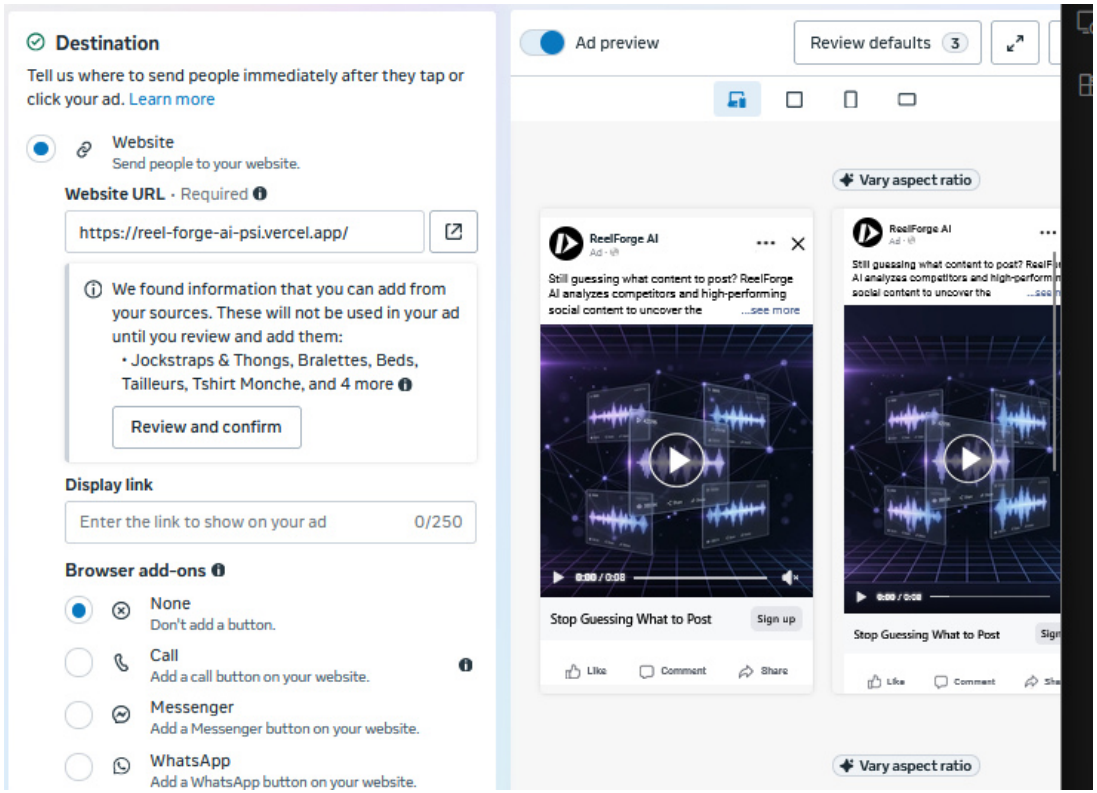

SIGN UP

Creative-format principle: image communicates quickly; video can add sequence and movement. Neither format is assumed to win before a fair test.

Configured for a website destination

The Ad level connects the creative, page identity, copy, CTA and landing page.

PARTNERSHIP AD

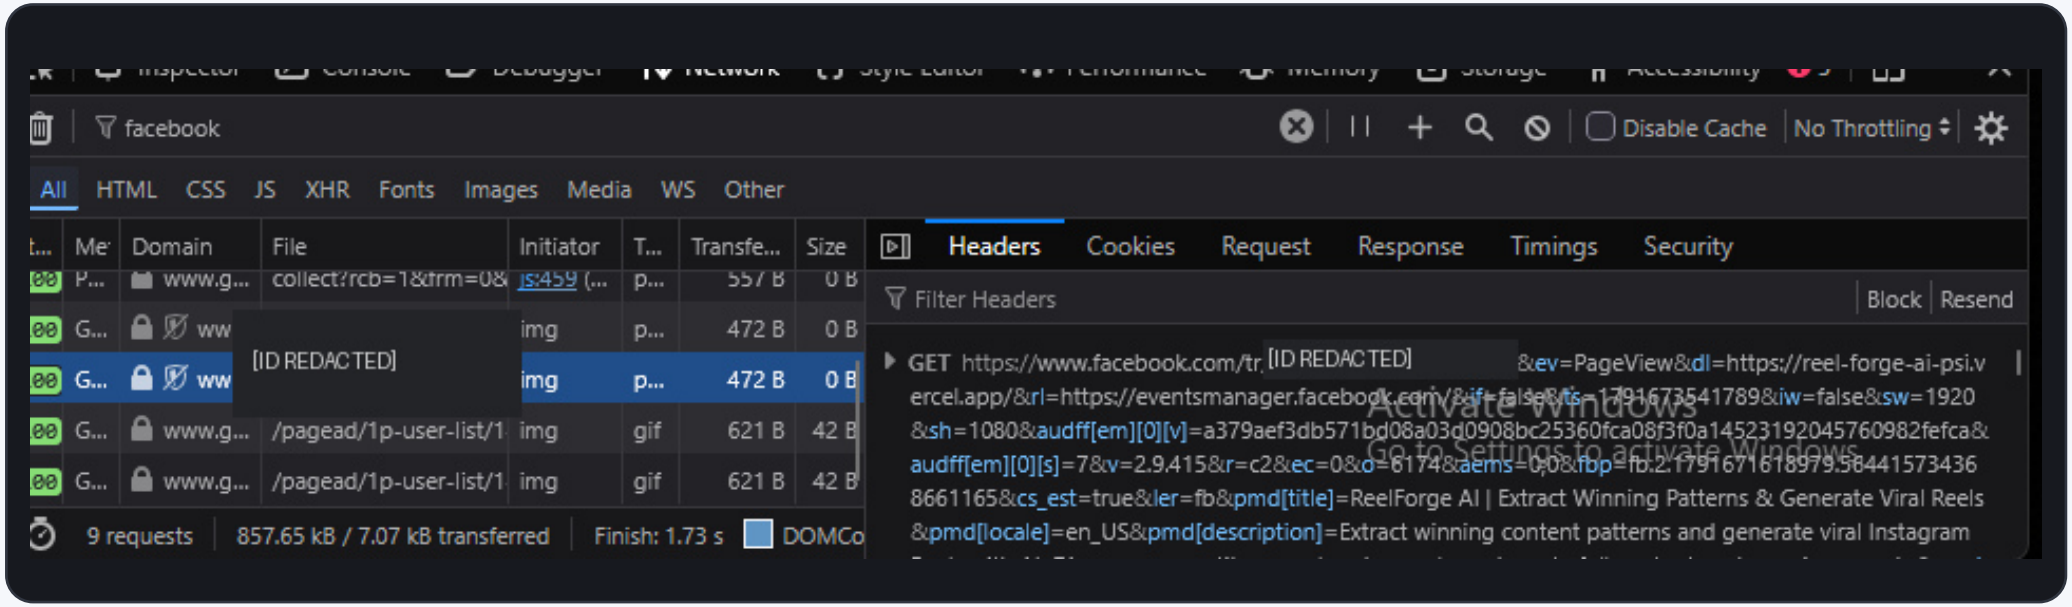

Off

PRE-LAUNCH CHECK

Review suggested product/source information and confirm the destination is accurate before publishing.

Pixel request verified in the browser

A network request is evidence that the browser attempted to send an event; Events Manager later showed PageView activity.

OBSERVED

Network request included ev=PageView. The Pixel ID is redacted in this public-facing evidence image. This verifies browser-side event transmission, not registration-event correctness or campaign attribution.

01 Browser

Pixel JavaScript is available and a PageView request was observed.

02 Events Manager

PageView appeared as an active event with received activity.

03 Still pending

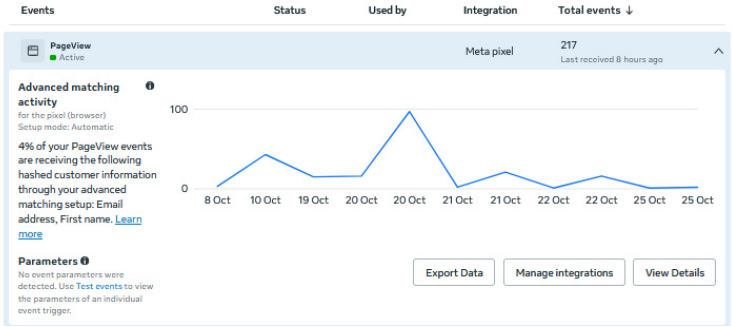

Verify what triggers Lead / InitiateCheckout and implement a correct CompleteRegistration mapping.

Events Manager shows website activity

Event names and counts were visible in the supplied screenshots. The screenshots do not establish that these events were generated by paid ads or that each event label maps to the intended user action.

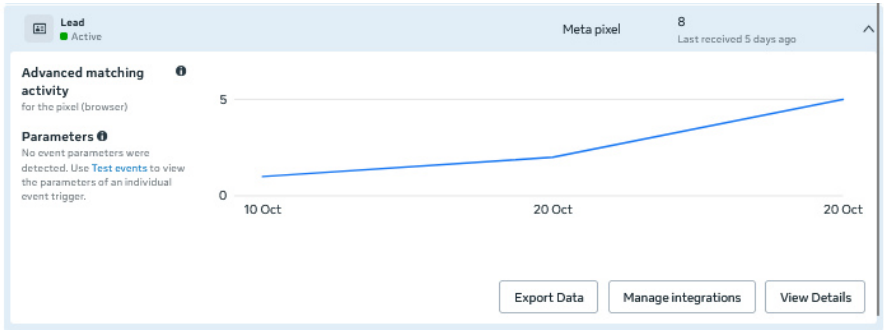

PageView

217 events shown in this screenshot

Lead

8 events shown in this screenshot

Start trial

46 events shown in this screenshot

Initiate checkout

55 events shown in this screenshot

Evidence caution: counts are point-in-time UI snapshots and may use different date ranges; do not sum or present as campaign results.

Measure the funnel, then diagnose the break

The framework below is a plan for a future validated live campaign; it is not a report of actual campaign performance.

CORE METRICS

CPM	`Spend / impressions x 1,000`	Cost of 1,000 impressions.
Link CTR	`Link clicks / impressions x 100`	Whether impressions turn into link clicks.
CPC	`Spend / link clicks`	Cost to acquire a click.
Registration rate	`Registrations / link clicks x 100`	How well visits become registrations.
Cost per registration	`Spend / verified registrations`	Cost for a real completed signup.
Frequency	`Impressions / reach`	Average exposures per reached person.

DIAGNOSTIC DECISION TREE

Low link CTR

Review hook, creative clarity, audience relevance and placement mix.

Good CTR, few registrations

Check message-to-landing-page match, mobile UX, signup friction and event tracking.

Registrations, few trials

Review onboarding, time-to-value, activation path and product usability.

Trials, few paid users

Investigate pricing, product fit, feature limits, trust and checkout friction.

A/B test example: Static vs motion graphic | Same audience, copy, CTA and destination | Judge on verified registrations + quality

PROJECT STATUS

Built with evidence.

Not misrepresented as live results.

COMPLETED / OBSERVED

- Campaign draft created with Leads objective.
- Website conversion location configured in latest capture.
- Video creative, copy, CTA and destination assembled.
- Meta Pixel request with ev=PageView observed.
- Events Manager displays active website event activity.

PENDING BEFORE LAUNCH

- Choose and verify the conversion event.
- Validate CompleteRegistration and existing event triggers.
- Resolve account / beneficiary-payer delivery warnings.
- Confirm landing page, URL and compliance; keep campaign unpublished.

RESUME-READY PROJECT ENTRY

Meta Ads Lead Generation

& Pixel Tracking - ReelForge AI

Hands-on practice project

- Configured a draft Meta Ads lead-generation campaign, including campaign hierarchy, audience hypothesis, Advantage+ settings, video creative, ad copy and website destination.
- Created a Meta website dataset and integrated the Pixel; used browser Developer Tools to inspect requests and verify PageView activity.
- Developed a registration-to-trial-to-paid measurement plan and documented unresolved event-mapping and pre-launch validation tasks.

Portfolio principle: show the work; be honest about the status.
