OBJECTIVE

Plan for qualified sign-ups

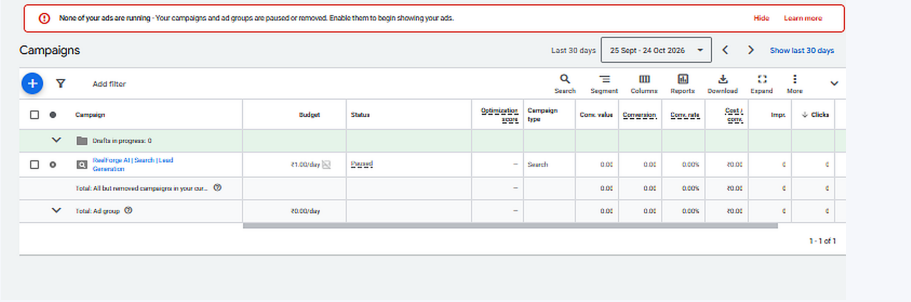

BUILD STATUS

Paused by design

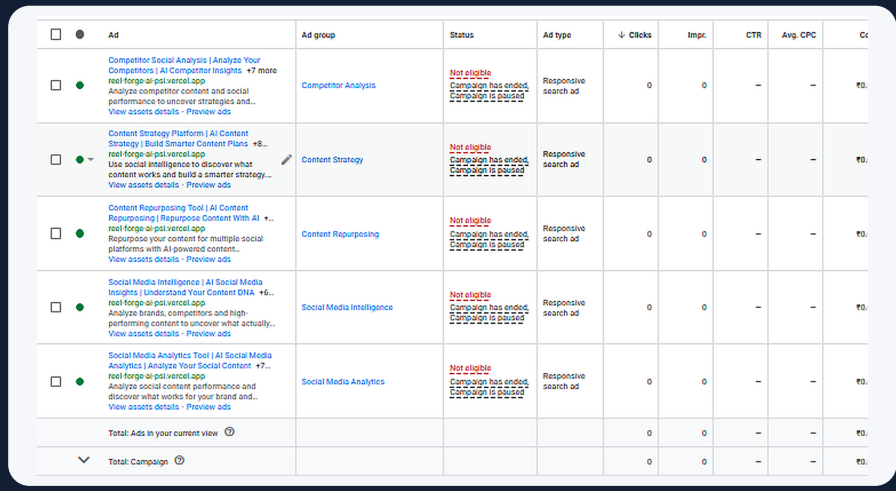

RESULTS

No live results claimed

CAMPAIGN WORKSPACE

AD GROUPS & CREATIVE INVENTORY

01 / PROJECT OVERVIEW

A strategy built around one clear outcome.

The goal is not to buy the most clicks. It is to build a controlled Search path toward relevant sign-ups.

THE PRODUCT

ReelForgeAI analyzes brands and competitors to surface content patterns for strategy and script planning.

THE CAMPAIGN INTENT

Target active searches for social media intelligence and content tools. Primary action: completed sign-up.

CAMPAIGN TYPE

Search

Keyword-led acquisition built around active queries.

OBJECTIVE

Leads

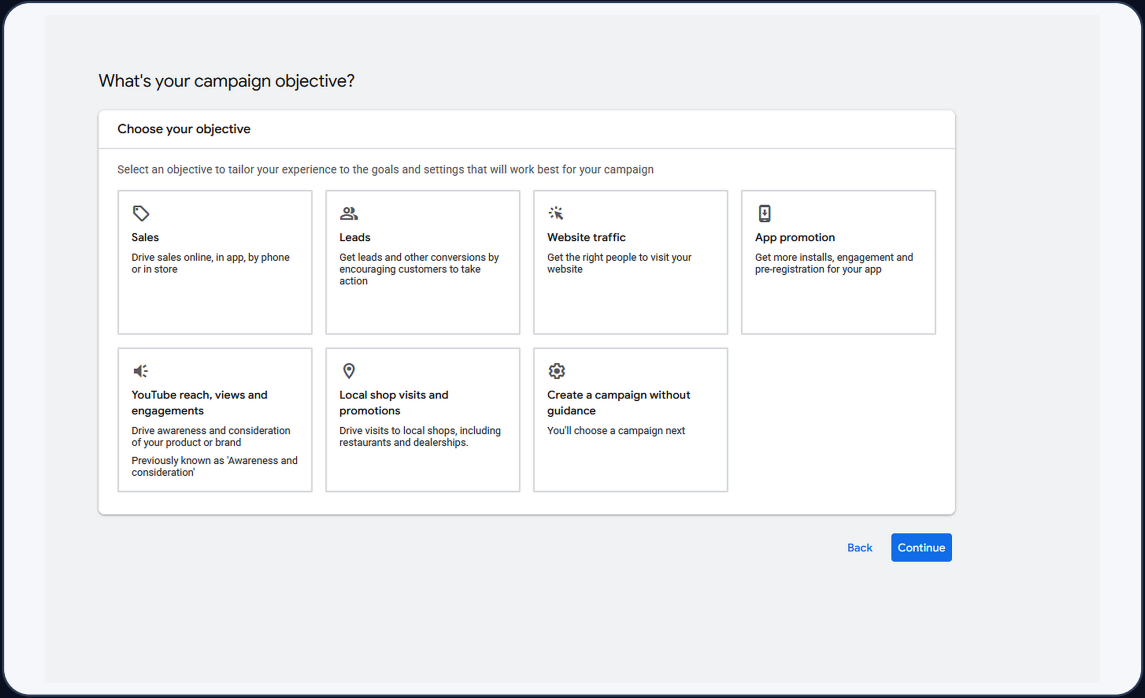

The intended primary action is a completed sign-up.

CAMPAIGN STATUS

Paused

Practice configuration only; no live delivery or spend.

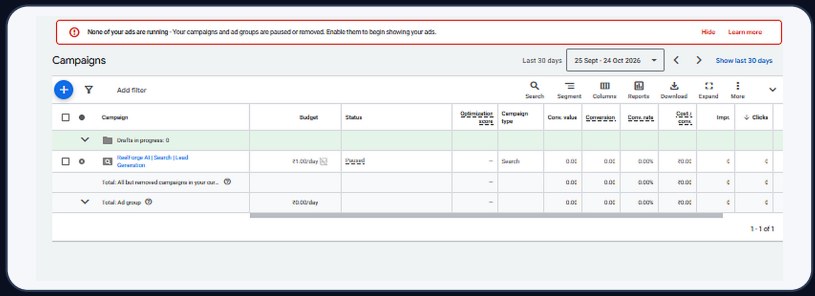

OBJECTIVE CHOICE IN GOOGLE ADS

WHY LEADS + SEARCH

Leads matched the intended sign-up outcome. Search was selected for query-level control, negative-keyword practice and clear search-term review.

CAMPAIGN WORKSPACE

Paused by design. Zero delivery is expected for this draft.

02 / CAMPAIGN ARCHITECTURE

Five ad groups. Five specific search intents.

The structure keeps each cluster focused so the search query, ad message and landing-page promise can stay aligned.

01 Social Media Intelligence
Core platform / intelligence intent.

02 Social Media Analytics
Tools and measurement-related searches.

03 Competitor Analysis
Competitor research and content benchmarking.

04 Content Strategy
Planning and AI strategy searches.

05 Content Repurposing
Reusing content across social platforms.

AD GROUPS IN THE GOOGLE ADS WORKSPACE

Ad group	Status	Target CPA	Conversions	Cost / conv.	Ad group type	Clicks	Impr.	CTR	Avg. CPC
Social Media Analytics	Not eligible: Campaign has ended, Campaign is paused	–	0.00	₹0.00	Standard	0	0	–	–
Social Media Intelligence	Not eligible: Campaign has ended, Campaign is paused	–	0.00	₹0.00	Standard	0	0	–	–
Content Repurposing	Not eligible: Campaign has ended, Campaign is paused	–	0.00	₹0.00	Standard	0	0	–	–
Competitor Analysis	Not eligible: Campaign has ended, Campaign is paused	–	0.00	₹0.00	Standard	0	0	–	–
Content Strategy	Not eligible: Campaign has ended, Campaign is paused	–	0.00	₹0.00	Standard	0	0	–	–
Total: All but removed ad groups in your c...			0.00	₹0.00		0	0	–	–
Total: Campaign			0.00	₹0.00		0	0	–	–

1 - 5 of 5

THE STRUCTURE RULE

Group by search intent, not by arbitrary keyword count. Each group should contain queries that can share a relevant ad message.

WORKING PRINCIPLE

Intent → relevant ad → suitable page → measurable sign-up

03 / KEYWORDS & EXCLUSIONS

Control the query space before scaling.

Start deliberately, read the actual search terms, then expand or exclude based on intent and business fit.

MATCH-TYPE APPROACH

01 Exact match

Example: `[social media intelligence platform]`. Starts with tighter control around a defined need.

02 Phrase match

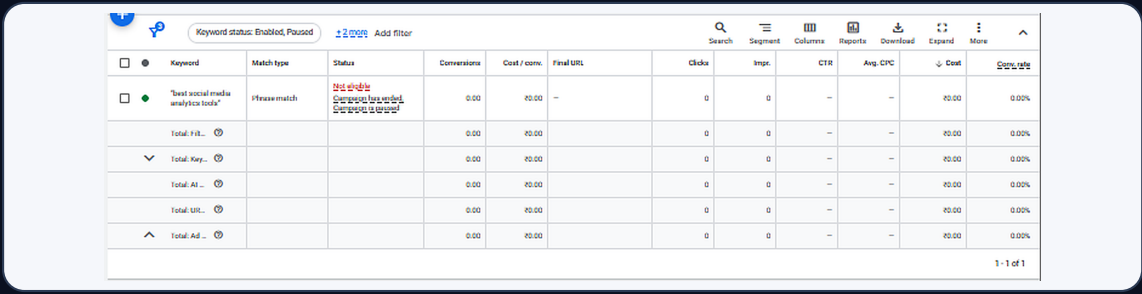

Examples: `"social media analytics tool"` and `"content repurposing tool"`. Allows relevant query variations.

NEGATIVE-KEYWORD LOGIC

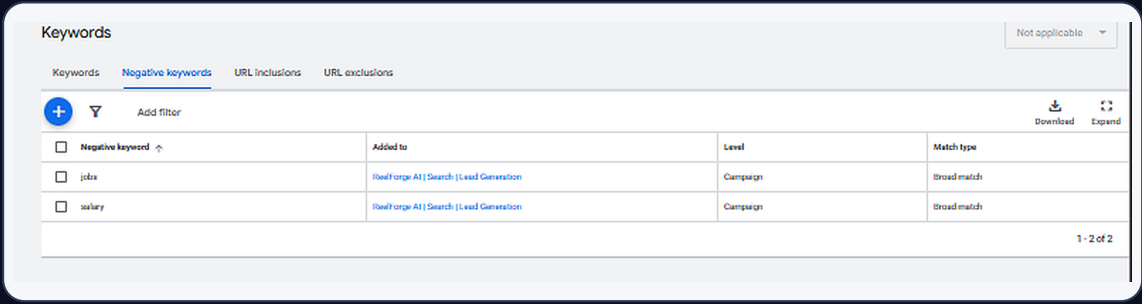

Campaign-level exclusions currently shown in the account: `jobs` and `salary`. They filter employment intent that is unlikely to signal product purchase or sign-up intent.

Negative keywords have their own matching behavior. Informational or “free” queries should be judged using search intent, conversion quality and funnel fit - not removed automatically.

KEYWORD TABLE / DRAFT QUERY CONTROL

CAMPAIGN-LEVEL NEGATIVE KEYWORDS

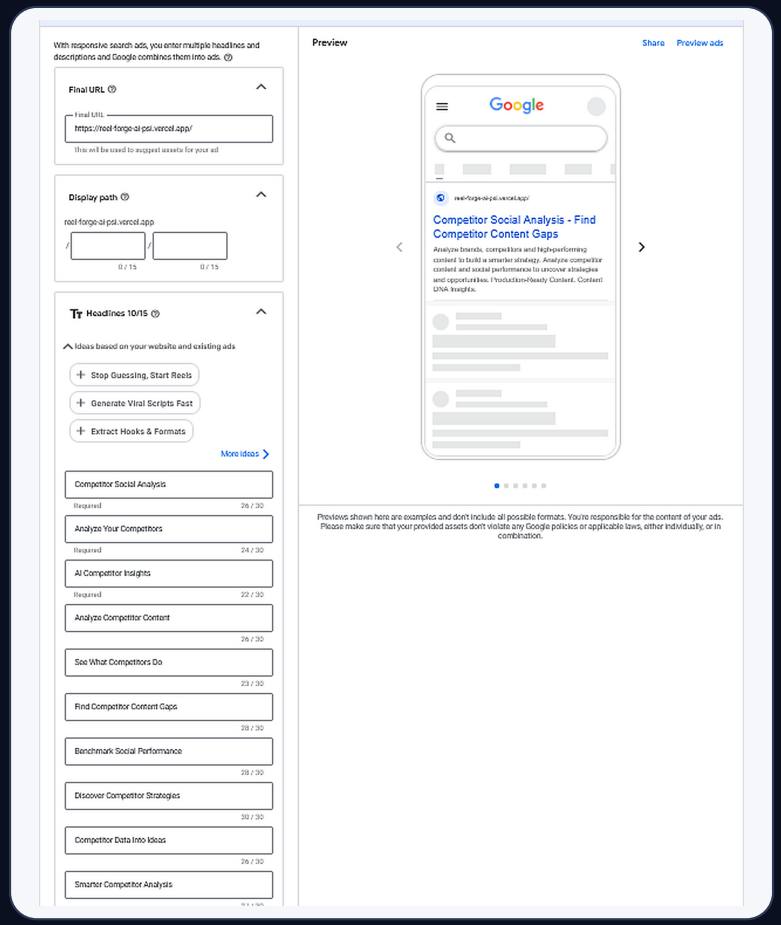

The keyword view shows a paused draft with no delivery metrics. The negative-keyword table shows two saved exclusions.

04 / RESPONSIVE SEARCH AD

Ad copy that matches competitor-analysis intent.

The example below is a draft RSA in Google Ads. The search preview is illustrative; this ad has not served.

HEADLINE WORKSPACE

MESSAGE HIERARCHY

RELEVANCE	Competitor Social Analysis
ACTION	Analyze Your Competitors
CAPABILITY	AI Competitor Insights
OPPORTUNITY	Find Competitor Content Gaps
STRATEGY	Discover Competitor Strategies

WHY THIS ANGLE

The ad reflects the searcher's intent: understand competing brands, identify content gaps and turn observations into strategy. It avoids unsupported guarantees such as "viral results" or a fixed performance uplift.

BUILD NOTE

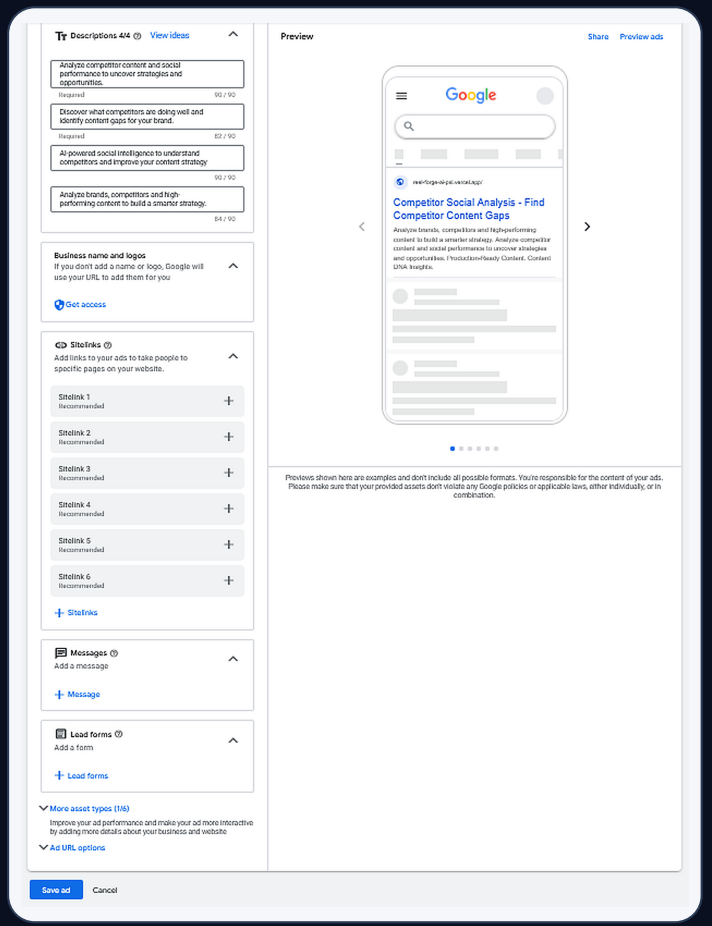

10 of 15 available headline fields are filled in the captured RSA editor. A second, distinct RSA can be added later for structured creative testing.

05 / DESCRIPTIONS & ASSETS

Carry the promise from ad to landing page.

Descriptions explain the value behind the headline; assets should help people choose the most relevant next step.

DESCRIPTION + ASSET WORKSPACE

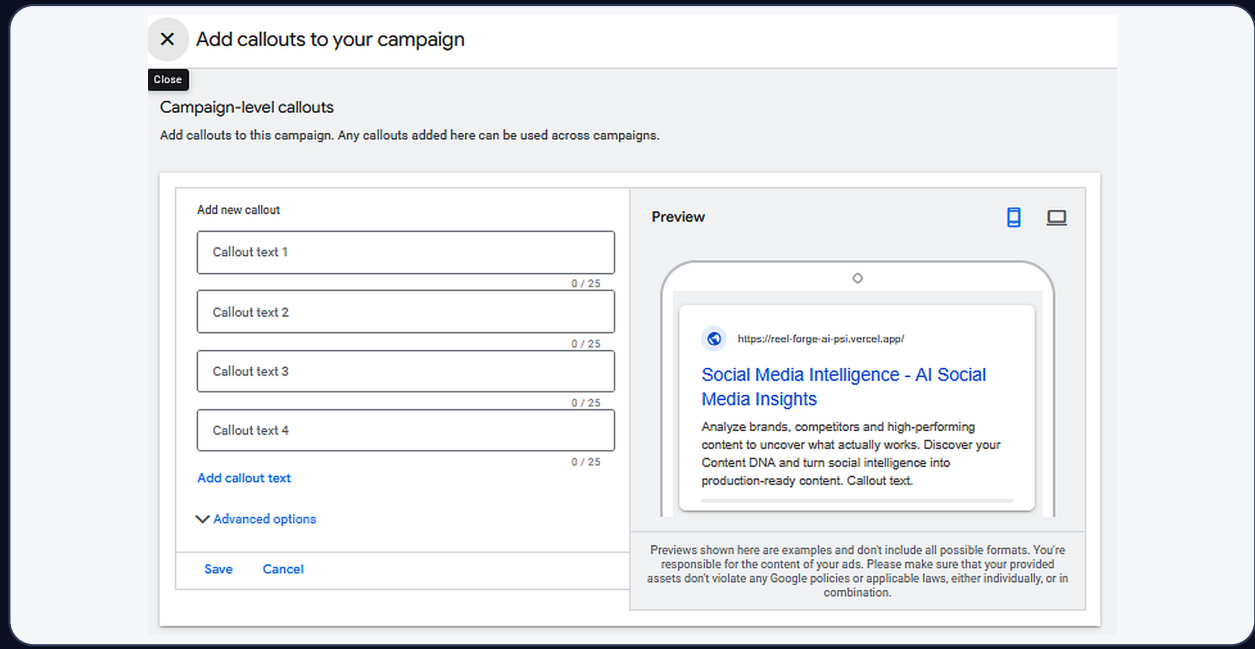

EXAMPLE DESCRIPTIONS

“Analyze competitor content and social performance to uncover strategies and opportunities.”

“Discover what competitors are doing well and identify content gaps for your brand.”

CALLOUT ASSET EDITOR

Callout fields are blank in this capture. Add accurate benefits and real sitelink destinations before a live launch.

06 / MEASUREMENT BEFORE LAUNCH

Measure the action that matters.

The intended primary conversion is a successful sign-up - but the account warning means tracking must be validated before launch.

01
SEARCH CLICK
A qualified query leads to the site.

→

02
SIGN-UP
Completed account registration.

→

03
ACTIVATION
User reaches meaningful product use.

→

04
PAID CUSTOMER
Downstream business outcome.

PRE-LAUNCH CHECK

Verify the sign-up conversion

The setup previously displayed an inactive or unverified website conversion action for sign-ups. Confirm the Google tag and event fire on a successful signup, then confirm Google Ads records it correctly.

CAMPAIGN CONTROLS

Objective: Leads Type: Search
Bidding: Maximize Conversions selected for the draft; validate conversion tracking first.
Targeting: India / English
Networks: Search Partners off; Display Network off
Automation: AI Max off for controlled practice.

CTR
Clicks / impressions

AVG. CPC
Cost / clicks

CVR
Conversions / clicks

CPA
Cost / conversions

07 / OPTIMIZATION PLAYBOOK

A repeatable loop, not a guess.

Once tracking is reliable and genuine delivery data exists, use the sequence below to decide what to change.

01

Validate the signal

Check conversion tracking and data quality before making performance decisions.

02

Read search intent

Keep, add as keyword, change match type, watch, or exclude based on actual query meaning.

03

Diagnose the funnel

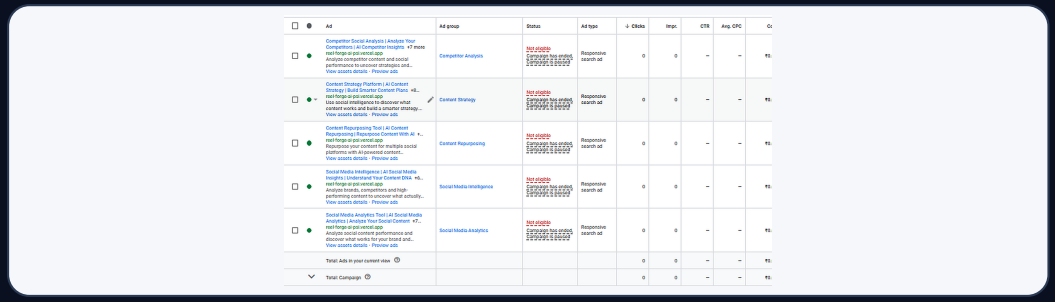

Separate click-through performance from sign-up rate, activation and lead quality.

04

Scale with economics

Compare CPA against an acceptable business target. Increase budget only when incremental volume is likely to be valuable.

AD INVENTORY IN THE DRAFT ACCOUNT

PORTFOLIO SUMMARY

I built a practical Google Search campaign structure for ReelForgeAI with five intent-led ad groups, controlled match types, employment-intent negatives, RSA copy and a tracking-first optimization plan.

Scope: paused practice build. No live campaign performance or business results are claimed.
